Phillips Olympia
385 Connie Crescent
Concord, Ontario
Canada, L4K 5R2

Attn. Michael Binder, General Manager

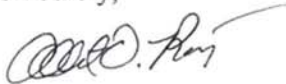

Dear Mr. Binder:

BWX Technologies (BWXT), Nuclear Products Division, would like to thank you and the employees at Phillips Olympia for the excellent job and professionalism shown in the design, fabrication and installation of two Double Column Vertical CNC Machining Centers (VMC). The two VMC's were recently installed in our Lynchburg, Virginia facility (2005) and are now in production.

In 2001/2002 BWXT purchased and installed six Olympia Engineering Horizontal Boring Mills that greatly improved our productivity and quality. Thus, when the need arose for addition equipment, we naturally turned to your organization. The quality of our existing equipment and excellent service record on these past machines were key factors in our buying decision.

We are as pleased with the result of these 2 new machines as we were with the previous equipment and look forward to working with you on future requirements for large parts machining. Thanks again for a job well done.

Sincerely,

Albert O. Riner
Manager, Tooling
