Re: Rebuild of our Giddings and Lewis Boring Mill Serial # 270-4-63

Dear Mr. Webster:

We at Precision Components would like to recognize all of the Phillips Olympia employees for the excellent job and professionalism shown in the rebuild and installation of our G&L Horizontal Boring Mill.

Phillips Engineering has shown an understanding and dedication to our requirements. Your personnel have provided effective technical support when required including elimination of an inherent spindle oil leak by your technician Edward Langwinski and your Service Manager. The Boring Mill has been operational for ten months and has proven reliable through all we have demanded of it. Throughout the rebuild project, Phillips Engineering has met and exceeded our expectations.

Based on our experience we would not hesitate to recommend Phillips Engineering Technologies to any company rebuilding a large HBM.

Yours truly,

William Hines  
Director of Engineering  
Precision Custom Components, LLC
